

THE HANTA COMPLEX

The "ghost eruption" in the Atlantic Ocean aboard the expedition ship MV Hondius occurred in April/May 2026, an incident occurred with three deaths and several illnesses. The diagnosis was Andes hantavirus. The WHO's amusing and official version claims that the victims contracted the virus through contact with infected mouse droppings during shore excursions in Argentina. However, the facts on board tell a different story. The affected individuals fell ill almost simultaneously, without the typical incubation period required by a biological pathogen.

The origin of the deception: Analysis of historical data (Korea War 1951) reveals a pattern: The hantavirus was "discovered" when soldiers in trenches were massively bombarded with the then new high-performance radar systems. Instead of acknowledging the physical damage caused by radar radiation (capillary leakage), they invented a "virus". This 75-year-old strategy will be perfected on the MV Hondius in 2026.

The institutions' power to define what constitutes a technical collapse (capillary leakage due to frequency load) transforms it into a media scare tactic. The shipping company and the tech giants are legally protected as long as a "mouse" is listed as the culprit in the files.

While the passengers of the MV Hondius enjoyed the panorama of Antarctica, a biophysical experiment was taking place above their heads. The ship was being retrofitted with the latest generation of Starlink Maritime terminals in 2025. Unlike old satellite dishes, these systems use phased-array technology. They don't scatter the signal, but focus it.

The cabin anomaly: Decks 4 and 5 as resonating chambers
The cabin occupancy analysis revealed that the three deceased were located on decks 4 and 5. The main antenna masts run directly above the ceiling panels of these cabins.

In southern latitudes, the transmission power must be massively increased to compensate for the thin coverage.

Electromagnetic interference fields (EMI) are created. Anyone sleeping in these cabins was in an area where microwave radiation not only heated the tissue but also massively disrupted the cell voltage (resting potential).

The physics behind the "virus symptom" is simple and gruesome: electroporation. High-frequency pulses in the gigahertz range increase the permeability of cell membranes. Normally, the cell wall protects the interior from toxins. Under the attack of the new receptors, the pores open. The result is Vascular Leak Syndrome (VLS). Plasma leaks from the veins. The lungs fill with fluid (pulmonary edema). The kidneys collapse due to the sudden weight of the cell debris. The medical records of MV Hondius state "Hantavirus-induced organ failure." The biophysical truth is: a physically forced collapse of vascular integrity.

The correlation of the "high-speed outbreaks"
The MV Hondius is not an isolated case. An analysis of the incidents on the MS Fram and the Silver Endeavour (2025/2026) shows that "virus clusters" occur precisely when the ships are operating.

Utilizing maximum bandwidth or performing software updates on the antenna systems. It's the perfect disguise: while passengers book "high-speed internet," their biology becomes collateral damage of the transmission power.

The prepared body: The role of travel vaccinations

To participate in expeditions to regions like Argentina or Antarctica, strict vaccination protocols (yellow fever, typhoid, Hantavirus prototypes) will be mandatory in 2026. Analysis of the ingredients in this new generation of vaccines reveals a dangerous synergy.

These are no longer classic inactivated vaccines, but bio-digital interfaces.

The electrical conductivity of human tissue is artificially increased by using lipid nanoparticles (LNPs) and metallic adjuvants (such as gold or silica nanoparticles).

The nanoparticles contained in the vaccines act in the body like tiny, passive receivers.

When the phased-array beams of the Starlink system encounter a body "charged" with these particles, the cells resonate.

The radiation doesn't need to be extremely high. The nanoparticles act as local amplifiers directly at the cell membranes and the blood-brain barrier.

If a passenger dies after vaccination due to stress triggered by the ship's electronics, the PCR test provides the desired label. This shifts liability away from pharmaceutical companies (vaccine injury) and the shipping company (radiation injury) and onto a "natural infection".

Why is nobody questioning this? A look at the general terms and conditions of insurance (GTC) of the major reinsurers (Munich Re, Swiss Re) for 2026 provides the answer.

The "electromagnetic exclusion clause" was implemented more extensively there. Damage caused by EMF and radiation is excluded from insurance coverage.

For all involved, it is financially vital that the passengers' deaths be declared a "virus event" (force majeure).

Recognition of the radiation effects would mean the immediate bankruptcy of the tech and tourism giants involved.

[09.05.26 11:07] Tatjana Enoekl: Behind the scenes, an alliance is operating that is shaping the healthcare system. has merged with telecommunications. The introduction of 6G sub-terahertz bands and the Joint Communication and Sensing (JCAS) project mark the end of biological privacy.

The antennas in smart cities function as radar. They scan not only data, but also the biology of passersby. The nanoparticles in the vaccines allow vital signs such as heart rate and cellular stress to be recorded in real time and reported to central servers of the WHO and network operators.

The hantavirus is associated with rats and mice. This hinders solidarity and promotes the acceptance of draconian hygiene measures.

The high mortality rate (up to 40%) ensures that no one discusses fundamental rights anymore. When the first victims die from internal bleeding – caused by the physical frequency shock – the population's psychological defenses immediately collapse.

Because phased-array beams can be precisely directed at city districts or individual buildings, "outbreaks" can be artificially created to politically justify targeted lockdowns or "quarantine zones".

The 2026 system works like a closed control loop:

Activation: A frequency cluster is powered on.

Reaction: The already compromised biology of humans reacts with cell stress and exosome release.

Then the typical wastewater test.

Action taken: The RKI (Robert Koch Institute) declares an alert level. The pharmaceutical industry provides the "solution" (new mRNA updates) which in turn make the body receptive to the next frequency level.

The events on the MV Hondius were not an accident, but a preview of the "deployed pandemic."

The virus is the legal operating system that has been imposed on the biophysical hardware of humans.

Those who look for the cause in nature will forever chase after mice, while the real danger lurks above our heads, in the form of high-speed antennas and in our own bloodstream.

When 6G is operational, a visible pandemic can be started anywhere, regardless of the cause.

US patent 5,614,193

The investigation has uncovered a document that dismantles the entire hantavirus narrative of 2026. On March 25, 1997, the US Army (Secretary of the Army, Washington DC) secured the patent for the genetic programming of a hantavirus vaccine.

A virus that is patented for military purposes is not a "natural phenomenon". It is a proprietary technology. They possess the genetic code and the method by which this code is activated in the human body.

The injection: Via the mandatory travel vaccinations (whose patents are held by the US military and partners like Baxter), the genetic skeleton of the virus (cDNA/mRNA) is injected directly into the Cells were introduced.

The body begins to produce proteins that correspond to the patented hantavirus code.

Patent 5,614,193 is the "operating system." The phased-array antennas of Starlink and 5G-Advanced are the "input devices." As soon as the specific microwave frequencies reach the body, which has been made conductive by the patented nanoparticles, a biophysical collapse (capillary leak) occurs.

The result: The lungs collapse and the blood vessels bleed. The administrators call it a "hantavirus outbreak" to distract from the electromagnetic execution.

The motive: control and exemption from liability.

The tool: Patented gene sequences.

The scapegoat: Nature.

The mouse in the forest never existed. It is a legal smokescreen for a worldwide crime.

These days, almost nothing can be ruled out when you know the goals of these beings and their henchmen. They use fear as fuel and aim to take over the world with humanoid robots. It's fascinating to consider the methods they employ.
